

HIREN CHUNARA

Laravel Developer

✉ hirenchunara1999@gmail.com ☎ +91 6355125225 📍 Ahmedabad

PROFILE

A motivated and detail-oriented PHP Developer with a strong foundation in core PHP, MySQL, HTML, CSS, JavaScript, and basic OOP concepts. I have hands-on experience building small-scale web applications such as an e-commerce website and a simple blog system, focusing on clean code, user-friendly interfaces, and database-driven functionality.

As a fresher, I am eager to apply my learning in a real-world environment, collaborate with senior developers, and contribute to scalable and secure web applications. I bring a strong willingness to learn new tools, adapt quickly, and take ownership of my tasks. I am looking for an opportunity in an MNC where I can grow professionally, work with modern technologies, and be part of impactful projects.

TECHNICAL SKILLS

Frontend

HTML, CSS, JavaScript, Bootstrap

Backend

PHP, Laravel Framework

Database

MySQL, SQL

Languages

C, C++

Tools & DevOps

GitHub, VS Code, Antigravity

EDUCATION

M.SC QPM

PROJECTS

Electro - E-commerce API & Platform

01/2026 – Present

Tech: [Laravel](#), [PHP](#), [MySQL](#), [RESTful APIs](#), [Postman](#)

Developed a robust e-commerce API platform named "Electro" using the Laravel framework, acting as the primary Backend Developer.

Built RESTful APIs for product management, category handling, and user data retrieval. Implemented Custom Middleware to ensure secure API access, role-based user authorization, and request validation.

Created an Admin Panel backend system to efficiently manage inventory, users, and orders. Secured API endpoints and optimized database queries using Eloquent ORM to provide fast and secure data flow.

Key Features & Highlights:

- Role: Backend Developer
- RESTful APIs integration & Postman endpoint testing
- Custom Middleware for role-based authorization
- Admin backend for managing products, categories, and users
- Eloquent ORM optimization for fast data flow

Coffee Shop – E-Commerce Website

11/2025 – 12/2025

Tech: [PHP](#), [MySQL](#), [MVC Architecture](#), [HTML](#), [CSS](#), [JavaScript](#)

Developed a dynamic Coffee Shop e-commerce website using PHP with MVC architecture to ensure clean code structure, scalability, and maintainability. The application allows users to browse coffee products, view details, and manage orders through a structured backend system.

Implemented complete CRUD operations for product management, categories, users, and orders using MySQL database integration. Designed secure and optimized database queries for efficient data handling and smooth performance.

The project includes an admin panel for managing products, inventory, pricing, and customer data, along with user authentication and session handling. Focused on backend logic, database relationships, and modular development following real-world application standards.

Key Features:

- MVC-based project structure
- Product, category, and order management (CRUD)

(Quality and Productivity Management System)

Sardar Patel University

01/2022 – 03/2024 | Vallabh Vidhyanagar

LANGUAGES

Hindi • Gujarati • English

CERTIFICATION

Backend Developer

TOPS Technologies

Completed

- MySQL database design & relational tables
- Admin panel for full website control
- User authentication and session management
- Clean and reusable PHP code
- Basic frontend integration for user interaction

AI TOOLS & PRODUCTIVITY

- ☐ ChatGPT Used for debugging assistance, code review suggestions, and logic generation for backend APIs.
- ☐ Antigravity Agentic AI integration for comprehensive task automation, architectural structuring, and accelerated development inside active codebases.
- ☐ GitHub Copilot Accelerates coding with intelligent contextual autocomplete, boilerplate generation, and refactoring suggestions.
